## **DETAILED ACTION**

### ***EXAMINER'S AMENDMENT***

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with William Esser on 11/13/2008.

The amendment has been amended as follows

- In claim 36, line 2, "a pattern generator" has been changed to --a second pattern generator--.
- In claim 36, line 3, "a selector" has been changed to --a second selector--.
- Claim 37 has been cancelled.
- In claim 26, line 9, "generated." has been changed to --generated and said filter device comprises a second pattern generator providing a second decoded signal corresponding to input packet offset of a received data packet word, a second selector selecting one of the second decoded signal and data pertaining to the peripheral device, and circuitry comparing at least a portion of the received data packet word to an output of the selector and generating at least one signal indicating acceptance of a successfully received data packet based upon the comparison.--.

### ***Reason for Allowance***

2. Claims 4, 16-18, 26, 27, and 31-42 are allowed.

3. The following is an examiner's statement of reasons for allowance:

Claims 4, 31-33, and 39-42 are allowable over the prior art of record since the cited reference taken individually or in combination fails to particularly disclose the following italic limitations:

In claims 4 and 39, *the generating a decoded signal corresponding to input packet offset of a received data packet word; selecting between the decoded signal and data pertaining to the device and generating a selection output signal based upon the selection; comparing at least a portion of the received packet word to the selection output signal; and indicating to the device that payload data corresponding to the received data packets is valid based upon the comparison; generating a plurality of response data packets based on the pertinent information, wherein the extracting and generating steps are performed without use of a microprocessor* and in combination with other limitations recited as specified in claims 4 and 39, respectively.

Claims 16-18 and 34-36 are allowable over the prior art of record since the cited reference taken individually or in combination fails to particularly disclose the following italic limitations:

In claim 16, *the filter device being configured to receive a plurality of data packets and identify pertinent information in the data packets, the pertinent information being pertinent to the peripheral device, the filter comprising a pattern generator providing a decoded output signal corresponding to input packet offset of a received data packet word, a selector selecting one of the decoded output signal and data pertaining to the peripheral device, and circuitry comparing at least a portion of the received data packet word to an output of the selector and generating at least one signal*

*indicating acceptance of a successfully received data packet based upon the comparison* and in combination with other limitations recited as specified in claim 16.

Claims 26, 27, and 38 are allowable over the prior art of record since the cited reference taken individually or in combination fails to particularly disclose the following italic limitations:

In claim 26, *the packet generator configured to generate a plurality of response data packets based on the pertinent information, comprising a pattern generator providing a first decoded signal corresponding to outgoing packet offset, and a selector selecting one of the first decoded signal, information pertaining to the communication device and outgoing payload data ...and the filter device comprises a second pattern generator providing a second decoded signal corresponding to input packet offset of a received data packet word, a second selector selecting one of the second decoded signal and data pertaining to the peripheral device, and circuitry comparing at least a portion of the received data packet word to an output of the selector and generating at least one signal indicating acceptance of a successfully received data packet based upon the comparison* and in combination with other limitations recited as specified in claim 26.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
